

IT'S UNDER **CONTROL**

When we talk about underfloor heating, we're not only referring to our distinctive red pipe that has become a hallmark for quality – but the design capability, technical expertise and dedicated support we offer to our customers.

Customers like you.

**Here's a little something about
what you can expect from REHAU.**

ARCHITECTS

Take away the burden of how to heat or cool your building and maintain your design freedom through REHAU surface heating and cooling solutions.

If you're considering underfloor heating in the design of your building, bring us in and we'll develop a solution that works perfectly, both during construction and in the years to come.

Don't quite know what you want? We'll develop a number of ideas based on what you are looking to achieve and present you with the right solution for your design needs.

Have an idea already? Our technical expertise will help you determine if your idea will work as intended and offer solutions if potential issues are detected.

Whether heating a floor, or cooling with a chilled ceiling— whatever you've designed on paper, we have the experience to bring it to life.

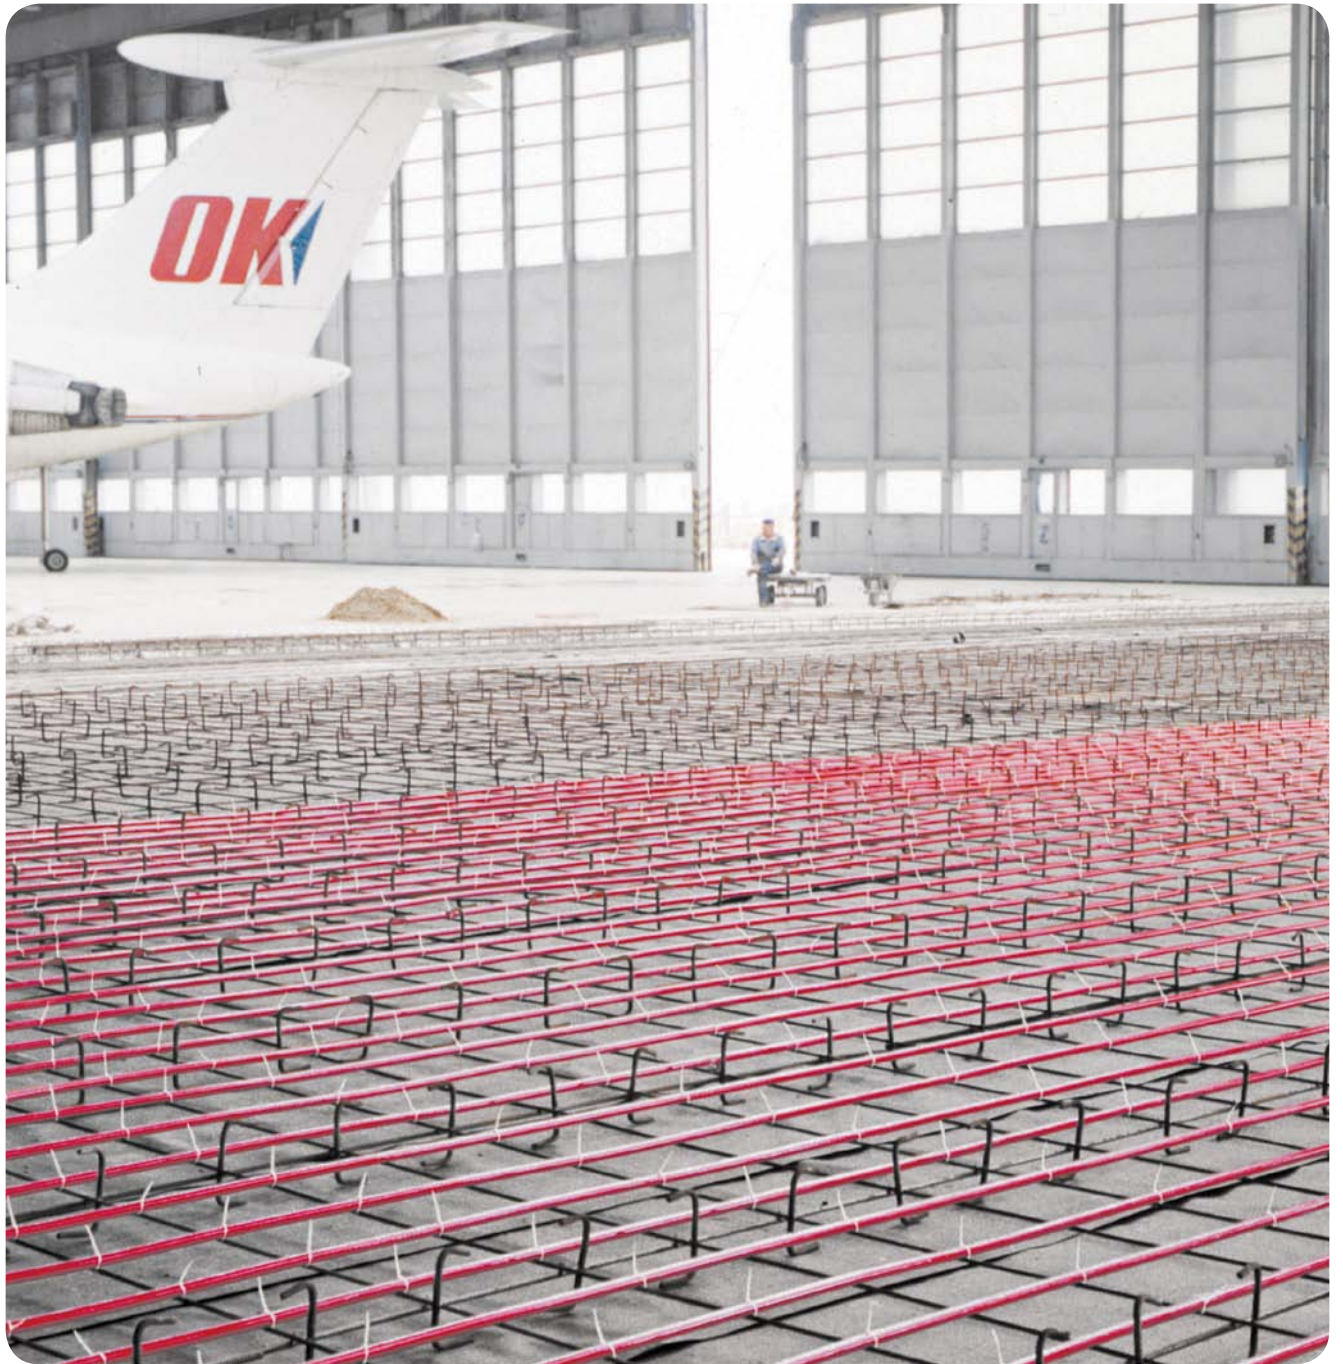

CONSULTANTS

If your building or construction project specifies underfloor heating, you should specify REHAU underfloor heating.

Our unrivalled technical expertise and design capability means that whatever design you're working to, we'll make it work for you. Refining the design spec down to the fine detail of what is required, how it will work and why.

Throughout the project cycle, we'll assign dedicated technical support to each one of your projects where REHAU is specified, meaning you speak to the same technical consultant every time, from start to finish.

Better for you. Better for your project.

IT HAS TO BE RED

At the heart of REHAU's solution is our universal pipe and REHAU EVERLOC™ fitting system. This permanent jointing system has an incredible track record with over 500 million fittings sold worldwide and no failures. Ever.

Our 10 year comprehensive warranty of the REHAU EVERLOC™ joint between pipe and fitting reflects the high level of confidence we have in our system, confidence you can have that a REHAU system minimises risks to your project.

The same pipe and REHAU EVERLOC™ joint system used in our underfloor heating is also used for our in-wall heating and chilled ceiling systems.

Whatever surface, whatever materials – our surface heating systems incorporate into all construction applications.

REHAU Underfloor Heating is in accordance with BS 1264-4.

TEMPERATURE CONTROL

REHAU underfloor heating solutions are specifically designed to fully integrate with Building Management Systems (BMS).

For the first time REHAU controls enable Facility Managers to monitor & control the complete heating and cooling system of a building, including the underfloor heating, from one location.

Our intelligent controls allow users to see and set room temperatures, troubleshoot issues and avoid the duplication that is a common result of using a separate system.

Manual controls are replaced by remote intelligent controls that talk directly with the main BMS system, giving users the right access, right at their fingertips.

REHAU Intelligent Controls connect to all leading BMS systems using MODBus®

ENVIRONMENTAL CONTROL

Whilst underfloor heating is undoubtedly an energy efficient way of heating or cooling buildings, the real efficiency of the system can only be realised through good design.

REHAU design underfloor heating and cooling solutions that benefit the construction process in the short term and the life of the building in the long term. With low water temperatures circulating in the floor system, the distribution of heat only where you need it can reduce on-site maintenance.

REHAU solutions adhere to the BRE Environmental Assessment Method (BREEAM): the voluntary measurement rating for green buildings in the UK.

With new regulations coming into force such as BREEAM and the Code for Sustainable homes, underfloor heating helps hit targets for building energy efficiency and allows optimal performance of low heat systems such as Ground source Heat Pumps.

REHAU offer a number of ground-source solutions – RAUGEO probes and horizontal collectors – combining with our underfloor heating to give you a total energy efficient solution.

SNOW AND ICE MELTS

Whilst outside, our Snow and Ice Melt systems can offer a solution which can help reduce interruptions to daily operations by allowing heavily used outdoor areas to remain free of snow and ice, such as loading areas, entry/exit ramps and pedestrian areas.

WHY SPECIFY REHAU?

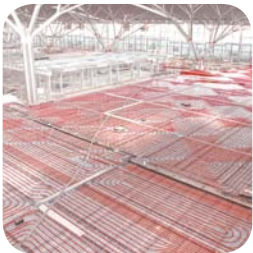

Our product and systems do their job, but what about helping you with yours?

TECHNICAL EXPERTISE: Over 40 years developing underfloor heating solutions across the UK and internationally.

Our pipe goes anywhere. Up, down, in the floor, walls or ceiling, chilled or heated. And everything in between.

DESIGN CAPABILITY: REHAU has arguably the best design team in the country working directly with our customers. Our design team offer full CAD design and support, from calculations and design drawings to material costs, providing you with a high quality service for a successful installation.

The devil's in the detail: our team routinely and diligently check all system designs – employing the 'four-eye principle' to ensure the highest quality.

FUTURE PROOFED

Future proofing not only includes the long term cost effectiveness of managing buildings that have a REHAU underfloor heating solution, but overall energy efficiency to support green targets.

Our solutions allow an underfloor heating system to be designed today to perform with tomorrow's renewable technologies, working with low temperature sustainable heat sources.

Our REHAU EVERLOC™ joints have never failed. Ever.

Wherever and whenever our pipe is laid, it will never let you or your customers down.

QUALITY. CONFIDENCE. COST-EFFECTIVE.

Our verbal and written application engineering advice is based upon experience and the best of our knowledge. However it is to be regarded as non-binding information. Working conditions and use under conditions for which the product was not intended and over which we have no influence exclude any claim resulting from our information. We recommend that a suitable check is made as to whether the REHAU product is suitable for the envisaged purpose. Application, use and processing of the products is carried out beyond the scope of our control and are therefore carried out exclusively at your own responsibility. If liability should still apply, then this is restricted, in the case of all damage, to the value of the goods supplied by us and used by you. Our warranty applies to the consistent quality of our products as per our specification and in accordance with our general terms and conditions of delivery and payment.
